

EDUCATION

Nanyang Technological University, Singapore
Bachelor of Computing, GPA: 4.5

Aug 2023 - Jul 2027

- Specialisation in Artificial Intelligence.

Lulea Technological University, Sweden
Bachelor of Computing, 4.6

Aug 2025 - Jan 2026

- Semester Exchange Programme.

EXPERIENCE

Voltade

Jan 2026 - Present

AI Software Engineer

- Architected a supervisor-agent system with three specialised sub-agents intelligently routing 500+ messages across numerous businesses, reducing manual work by an estimated 90%.
- Developed conversational booking flow handling new appointments, rescheduling, and cancellations with real-time slot availability checking with Plato healthcare scheduling API for patient lookup, appointment CRUD operations.
- Deployed WhatsApp-integrated AI agents to production for two healthcare clients, enabling 24/7 automated patient communication without human intervention.

Pints AI - <https://app.autothought.ai/>

May 2025 - Aug 2025

AI Software Engineering

- Pioneered development of AutoReport, an AI-powered reporting tool leveraging RAG (Retrieval-Augmented Generation) and major LLMs (Claude 4.0, LLaMA Maverick), improving overall report quality by 400%.
- Designed and implemented Stripe integration for platform's credit system, streamlining monetisation and enhancing user payment experience.
- Engineered scalable backend services with Express.js, orchestrated via Docker and Kubernetes, utilising PostgreSQL + Prisma ORM, Redis for caching, and AWS S3 for file storage.

RAD - <https://create.reallyaddictivedrinks.com/>

Dec 2024 - Apr 2025

Full-Stack Engineer

- Reduced customer onboarding workload by 60% by delivering a full-stack microsite with AI-generated personalised content and automated lead follow-ups via Brevo, directly supporting the digital marketing funnel.

KEY PROJECTS

Agent Planner - Agent Forge Hackathon 3rd Place: TypeScript

Mar 2026 - Mar 2026

Lead Engineer - sprintly-begonia-89fe87.netlify.app

- Architected an autonomous event orchestration platform using a 5-agent Mastra pipeline with real-time SSE-based trace streaming for full decision explainability, reducing manual event planning workflows from hours to under 2 minutes.
- Engineered a production-grade agentic backend featuring parallel API ingestion across event sites, write-through context caching, and observability instrumentation, demonstrating enterprise patterns for reliable agent systems.
- Scraped with Bright Data, Browser automation with ActionBook, Memory and context management with Acontext.

NTU Centralised Events Platform: TypeScript

Jan 2026 - Feb 2026

Lead Engineer - student-events.lovable.app

- Deployed a full-stack event management platform with Role-Based Access Control (RBAC) using React, TypeScript, and Supabase, featuring OAuth authentication, real-time data sync, and admin approval workflows.
- Project was demonstrated to Product Team in NTU Student Affairs Office resulting in conversion to work on live student management system as part of Work Study Scheme.

TECHNICAL SKILLS

- Programming Languages: Python, Java, C, C++, JavaScript, Typescript, , SQL
- Frameworks: React, Vite, Next.js, TailwindCSS, Node.js, Express
- Tools: Supabase, Docker, Nginx, Playwright, Vercel, Render, Kubernetes, ArgoCD, Redis
- AI tools: Mastra, OpenAI API, LangChain, OpenCode
